ALGORITMA & PEMROGRAMAN

PROGRESS 3 - FINAL PROJECT

Aplikasi Peminjaman dan Pengembalian Buku

Dosen Pengampu:

7174 - Ir. Sawali Wahyu, S.Kom., M.Kom

Kelompok 7

1. **Muhamad Akbar Fadilah - 20200801269**
2. **Christian Niko Saputra - 20240801295**
3. **Denis Prastya Putra - 20240801319**
4. **Davina Tri Febriyanti - 20240801361**

Tujuan Presentasi:

Memaparkan perkembangan final project pada tahap ketiga, yaitu pembuatan Aplikasi Peminjaman dan Pengembalian Buku.

Daftar Isi:

- 1. Pendahuluan**
- 2. Metode**
- 3. Rancangan**
- 4. Hasil Aplikasi**

PENDAHULUAN

Pendahuluan

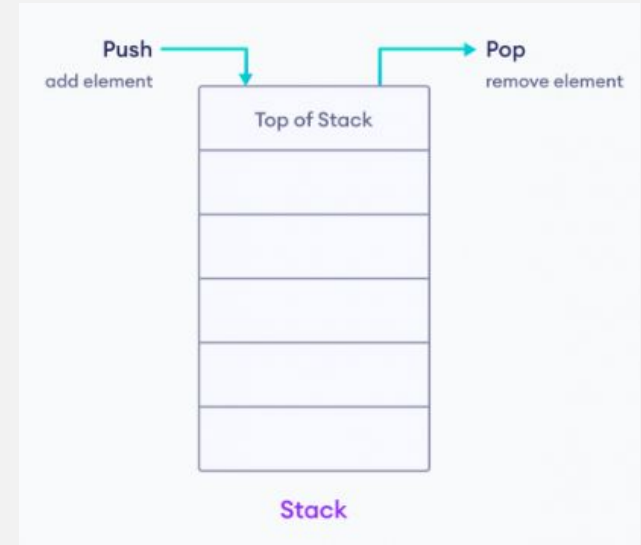

Dalam era digital yang terus berkembang, perpustakaan tradisional menghadapi berbagai tantangan, seperti kesalahan pencatatan, pelacakan status buku yang tidak efisien, dan keterbatasan dalam menghasilkan laporan yang akurat. Untuk menjawab tantangan tersebut, dikembangkan **Aplikasi Peminjaman dan Pengembalian Buku**, sebuah sistem manajemen perpustakaan digital berbasis **C++** dengan implementasi struktur data **Stack**. Aplikasi ini dirancang untuk mengotomatisasi proses peminjaman dan pengembalian buku, mempermudah administrasi, serta memberikan visibilitas yang lebih baik terhadap inventaris perpustakaan. Dengan fitur seperti **manajemen buku**, **manajemen anggota**, **transaksi**, dan **pelaporan**, aplikasi ini bertujuan untuk meningkatkan efisiensi operasional perpustakaan, meminimalkan kesalahan pencatatan, dan mendukung pelacakan serta pengelolaan buku yang lebih akurat dan modern.

METODE

Metode

Metode utama yang digunakan dalam aplikasi ini adalah struktur data **Stack**, yang beroperasi dengan prinsip **LIFO (Last In, First Out)**. Artinya, data yang dimasukkan terakhir akan diakses atau dikeluarkan terlebih dahulu. Struktur ini sangat cocok untuk **mengelola proses peminjaman dan pengembalian buku**, karena transaksi terbaru dapat langsung diproses terlebih dahulu.

Metode

Dalam aplikasi, **Stack** digunakan untuk:

- **Mencatat Peminjaman Buku:** Setiap buku yang dipinjam akan dimasukkan ke dalam **Stack**, sehingga buku yang dipinjam terakhir akan berada di posisi teratas untuk pengelolaan yang mudah.
- **Mengelola Pengembalian Buku:** Saat buku dikembalikan, data di **Stack** akan diperbarui dengan menghapus atau mengganti data sesuai dengan buku yang dikembalikan.
- **Pelacakan Status Buku:** Dengan memanfaatkan sifat **LIFO**, aplikasi dapat memastikan bahwa data peminjaman dan pengembalian dikelola secara terstruktur dan efisien.

Konsep **Push (menambahkan data)** dan **Pop (menghapus data)** digunakan untuk memanipulasi **Stack** dalam aplikasi ini.

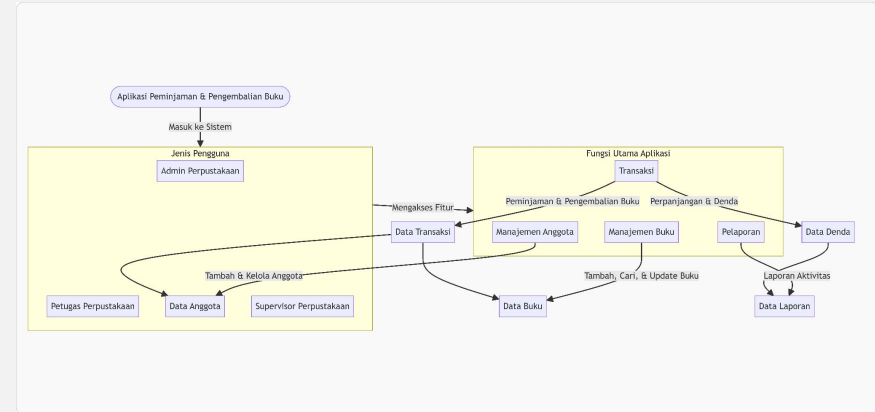

Penggunaan metode ini membantu menjaga data tetap konsisten dan mempermudah pengelolaan transaksi secara sistematis.

RANCANGAN

Rancangan

Pada tahap rancangan, aplikasi peminjaman dan pengembalian buku dirancang dengan memperhatikan alur sistem yang melibatkan berbagai jenis pengguna, fungsi utama, serta data pendukung. Sistem ini dirancang untuk diakses oleh **Admin Perpustakaan**, **Petugas Perpustakaan**, dan **Supervisor Perpustakaan**, masing-masing memiliki akses terhadap fitur sesuai dengan tugasnya.

Rancangan

Rancangan aplikasi mencakup empat fungsi utama:

- **Transaksi:** Meliputi peminjaman, pengembalian, perpanjangan buku, dan penghitungan denda keterlambatan.
- **Manajemen Buku:** Menambah, mencari, memperbarui data buku, serta mengelola katalog buku secara digital.
- **Manajemen Anggota:** Mengelola data anggota, termasuk pendaftaran, pengelolaan profil, dan riwayat peminjaman.
- **Pelaporan:** Menyediakan laporan aktivitas perpustakaan, statistik buku populer, dan laporan keterlambatan secara akurat.

Seluruh fungsi ini saling terintegrasi melalui data pendukung, seperti **data buku**, **data anggota**, **data transaksi**, dan **data denda**, yang memastikan pengelolaan perpustakaan berjalan secara efisien dan terorganisir. Diagram alur sistem memberikan gambaran menyeluruh tentang interaksi antar komponen di dalam aplikasi.

KESIMPULAN

Kesimpulan

Aplikasi Peminjaman dan Pengembalian Buku berbasis C++ yang dikembangkan oleh Kelompok 7 memanfaatkan struktur data Stack untuk mengelola proses transaksi dengan efisien. Implementasi konsep Last In, First Out (LIFO) melalui metode seperti `push()`, `pop()`, `top()`, `empty()`, dan `size()` memungkinkan pengelolaan data peminjaman dan pengembalian buku secara terstruktur.

Kelebihan aplikasi ini meliputi:

- Antarmuka pengguna yang sederhana dan intuitif.
- Mendukung pengelolaan data secara terorganisir berdasarkan prinsip LIFO.
- Memanfaatkan Standard Template Library (STL) di C++, sehingga mempercepat pengembangan.

Kesimpulan

Namun, terdapat beberapa keterbatasan:

- Struktur data Stack tidak mendukung traversal langsung, sehingga kurang optimal untuk kebutuhan akses acak.
- Cocok hanya untuk aplikasi yang mengutamakan urutan LIFO.

Secara keseluruhan, aplikasi ini berhasil menjawab tantangan dalam pengelolaan perpustakaan tradisional, meningkatkan efisiensi, meminimalkan kesalahan pencatatan, dan mendukung pelacakan inventaris yang lebih modern.
